

PHOTOGRAPHY BASICS

with Matilde Damele

During the 10 classes course we go through the key elements of technical photography; from Shutter Speed to Aperture, Exposure, Composition, Digital Formats and Sequencing of photographs.

We also practice outside what we learnt in class and we review the images together the following week.

COURSE PROGRAM

Class 1	The origins of photography
Class 2	Shutter speed
Class 3	Aperture and different types of lenses
Class 4	Practice
Class 5	Exposure
Class 6	Practice
Class 7	Composition, b&w & colour, practice
Class 8	Practice
Class 9	Formats, digital compression, postproduction
Class 10	Sequencing

The participants will need to have a camera that allows them to use its manual functions. In case they use a phone to photograph, an app can be downloaded to easily use the manual functions.

The participants will also bring a pen/flash drive to class to download and discuss the photos taken.

By the end of the course the students will have knowledge of:

How to use the light and expose the camera correctly

The different use of lenses

Good composition and sequencing

Creative exposure and shutter speed

Shooting in low light

How to read an image and create a sequence of 3 or more images

The basics of postproduction
